

C4 · affine elliptic waves and a free lattice curve

$$v'''' + Avv'' + B(v')^2 + Cv^3 + a_2v'' + a_0v + a_{00} = 0, \quad v = \alpha\wp + \beta$$

Panels 1-5: $a_2 = 1, a_{00} = 0$; a_0 varies. Panel 6: one fixed Lax equation, with β free. Diamonds mark $\Delta = 0$.

The explorer lets you edit all six equation coefficients, select the sweep coordinate, focus a branch, and inspect its profile. Only the affine- $\wp$ sector is shown.
