

Quintic · the even-operator line

$(n, p) = (5, 4) \cdot q = 1$

$u^{(4)} + u^{(2)} + \dots - 24u^5 = 0$

Grey cusp: $\Delta = 0$
Pale region: $\Delta > 0$
Diamonds: real degeneration parameters

Even operators also carry characters of order two. This branch is separate from the full-order character family. Every point determines the compatible lower coefficients; each such equation has one meromorphic wave. Lattice of the full twisted period group Γ · Real invariants do not alone imply a bounded real profile.
