

Septic sixth order · a sixfold character

$(n, p) = (7, 6) \cdot q = 1$

$P(D)u - 720u^7 = 0, \quad a_5 = 1$

Grey cusp: $\Delta = 0$
Pale region: $\Delta > 0$
Diamonds: real degeneration parameters

The normalized coefficient $a_5 = 1$ is fixed; the other coefficients follow an exact one-parameter family.
Characters of order six have six ordinary poles. The real cusp parameters are $t = -1, -1/9$, and 0 .
Lattice of the full twisted period group Γ · Real invariants do not alone imply a bounded real profile.
